

# Add AI Product Delivery Without Expanding Your Permanent Bench

Principal-led AI product and modern full-stack delivery for agencies that need dependable implementation capacity.

## Where Mentoritek Fits

- An AI, SaaS, or custom-product engagement needs experienced implementation capacity.
- A prototype or vibe-coded MVP needs production architecture, security, and maintainable code.
- Your strategists, designers, or fractional leaders need a dependable technical delivery partner.
- A deadline, launch, or troubled build needs principal-level technical judgment quickly.

## Delivery Capabilities

### Discovery & architecture

A defensible product direction, smallest valuable slice, architecture, risks, and delivery plan.

### AI product & full-stack builds

MVPs, product slices, RAG and agents, SaaS capabilities, APIs, data systems, and deployment.

### Production hardening & rescue

Security, authorization, reliability, grounding, evaluation, observability, testing, and handoff.

### Ongoing product engineering

A defined workstream with senior architecture, implementation, review, and delivery leadership.

## Ways to Partner

1

### Agency-branded co-delivery

Mentoritek works as part of your extended delivery team while you retain commercial ownership.

2

### White-label delivery

Mentoritek works behind your brand with an agreed communication path and clear accountability.

3

### Named specialist

Mentoritek is introduced as the technical delivery partner when that credibility helps the engagement.

## Why Mentoritek

- Principal-led from scope through handoff
- Working software, not architecture theater
- Agency-safe collaboration and clean communication
- Production-minded AI, security, and evaluation
- 35+ years across SaaS, IoT, industrial systems & AI

## Modern product stack

TypeScript, Next.js, React, Node.js, Vercel, Supabase, PostgreSQL, pgvector, Trigger.dev or Inngest, Vercel AI SDK, Upstash, APIs, authentication, and major model platforms.

## Relevant Proof

35+ years across startup products, SaaS, aviation, manufacturing, industrial systems, IoT, and AI-enabled applications — including work connected to Siemens, Carrier, Atlas Air, Fairbanks Morse Defense, Kubota, and an Amazon eBMS product.

Current proof includes a private operations platform combining project management, structured workflows, relational data, and AI-assisted operations. Demonstrations are sanitized to protect proprietary workflows and source code.

## A Good First Conversation

Bring the client outcome, current product state, deadline, known constraints, expected communication model, and where your existing team needs help.

**Mentoritek will quickly identify whether the work is ready for a build, needs paid discovery first, or is not the right fit.**

## Have an upcoming product engagement?

Start with the outcome, current state, deadline, constraints, and where your team needs help.
